Hosereels & Fittings

Elaflex Aviation Hose

Yellow band aircraft refuelling hoses, suitable for all aviation gasoline and jet fuels (JET A1), anti-icing fluids and motor oils.

Elaflex standard type "HD-C" with two textile braids. Light weight, flexible hose for all pressure purposes.

NOTE: Not for suction. Burst pressure > 80 bar / 1200psi.
The hose does not kink with a permanent pressure of at least 0.5 bar

- Temperature range: -30° up to +70° Celsius
- Electrical resistance: Between 103 and 106 Ohm
- Lining: Nitrile rubber (NBR) seamless tube, antistatic, no fuel solubility.
- Reinforcement: Textile braids without metallic strands.
- Cover: Chloroprene (CR), electrically conductive, ozone and flame resistant, highly abrasion resistant

Approved to EN1361 (European) , AS2683 (Australian) and API1529 (American) Standards.

Specified by almost all major oil companies.

Type HD-C
EN 1361 - type C

Elaflex Hose Fittings

Male & female threaded couplings in brass nickel plated with Quick Clamp Type in either pin or bolt style to international standards. Working pressure up to 25 bar.

Supplied separately or part of complete tested hose assembly.

These hose clamps and hose tails are used on most if not all LIQUIP aviation fuelling vehicles and other special fuel handling equipment or vehicles.

Hose Swivel

These Liquip Hose Swivels are typically used on overwing nozzles (i.e. the Liquip AVN040 / 042 overwing nozzles).

These swivels are nickel-plated brass. All threads are BSPP. A stainless steel version is available upon special request.

Gammon Hose Quick Disconnect

Fast change from Overwing to Underwing nozzle with no spill

FAST OPERATION Connect or disconnect in seconds, without tools. To connect, pull back sleeve, push connector into coupler and release sleeve. To disconnect, pull back coupler sleeve and connector halves separate. Valve opens automatically when halves are connected.

DEPENDABLE OPERATION The ball-lock mechanism is the simplest, most reliable type in use, providing positive connection under constant or surge flow - even excessive shock. Ball bearing sleeve lock permits 360 swivel action, preventing build-up of hose torque. Hardened stainless steel balls give extra long service. Stainless steel ball race resists wear for longer life.

Molded U-Packer seal provides contact over several times the normal O-ring sealing area. Its design embodies a self-energising feature that gives a positive seal at all pressures. This seal is capable of sealing under side loads and will tolerate small scratches and some dirt without leakage.

TIGHT SEAL DISCONNECT The poppet has a metal-to-metal stop to control compression on the valve o-ring seal. Seal is recessed and wedged in coupler body to keep it in place. The stop also prevents poppet blow-out.

LOW PRESSURE DROP DESIGN

1 1/2" size: 2.6 psi @ 189.3 lpm
2" size: 2.9 psi @ 379.5 lpm

All couplers and actuators are made of aluminium, unless stated otherwise. **NOT** designed for suction service.

GTP-1506-40	Seal Kit suit 8732 Coupler

N.B. For all other sizes, please contact our sales department

Hose Beads

Increase the life of your aviation hose

Replacing aviation hose can be costly. Fitting hose beads saves the hose from rubbing along the tarmac, minimising wear and abrasion damage. The bead allows for relatively effortless manoeuvring of the hose and also acts as a hose marker at night.

The 2-piece yellow plastic beads bolt or clip together around the hose and Liquip suggest a bead is fitted every 700 mm run of hose.

Pending conformance with EI 1522. Contact Liquip for further details.

Spacings

20 metre Hose	Reel gooseneck to first bead centre	Hose bead spacing (centre-centre)	Last bead centre to nozzle	Qty of beads / 20m
Recommended	3m	700 mm	1.5 m	32

HB2.5Z	suit 63mm ID hose	Screw
CHA100-1Z	suit 4" code hose	Screw

Hose Reflective Cover

Be Seen! Be Safe!

Liquip Input Hose Covers help prevent incidents occurring around dispenser inlet hoses, particularly during night refuelling. The “Flame Orange” reflective material with two yellow stripes ensure increased visibility. Installation and removal is easy as the covers are fastened using Velcro.

Ordering Information

Aviation Hosereel Drum Style - HP Series

High pressure hose reel suitable for petroleum products

The HP series of hose reels are a generation of reels for high pressure use and available with hand or hydraulic rewind and in different sizes. Sealing is by lip seal and all models incorporate a lock assembly. Ball bearings look after rotation, with end thrust being taken care of by heavy-duty circlips and thrust washers. All components are easily replaced and all wetted surfaces are nickel plated for longer life.

Stainless steel inlet flange, nickel plated gooseneck with 1 1/4" MBSP.

Technical Specifications

Sizes	Hose size - 25mm, 32mm and 38mm diameter Rewind type - Manual or hydraulic Drum width - 300mm, 450mm or 600mm Anti-rotation lock to prevent hose unravelling
Pressure	Rated to 2100 kPa
Servicing	Quarterly grease plumber block bearing Annually remove and repack bearing on the inlet side of the reel
Mounting	4 x M10 bolts
Materials	Stiffened steel cheek plates, extremely sturdy thick wall manifold with added strength from steel inner drum, steel base frame and self aligning bearing. Polyurethane seals.
Options	Hot dip galvanised version 1 1/2" N/P FBSP gooseneck Rollers and guides

Aviation Hosereel Drum Style - AHR Series

Drum style hose reel suitable for aviation fuels

A convenient method of storing a quantity of fuel delivery hose. When the fill point is located at varying location the required length of hose can be dispensed and rewound by electric, hydraulic or manual means.

Liquip's sturdy aluminium AHR250D Drum style hose reel range adapts to a variety of drive mechanisms.

EASY OPERATION Just unhook nozzle and dispense hose to the required location. To rewind hose a manual handle, electric motor or hydraulic motor is used. The hose nozzle storage can be fitted with interlocks to help prevent drive away accidents and product spills.

Technical Specifications

Sizes	Hose size - 1", 1 1/4", 1 1/2", 2" & 2 1/2" Rewind type - Manual, electric or hydraulic Drum width - 300mm, 450mm, 600m or 950mm An optional A-Frame is available.
Pressure	Rated to 2100 kPa
Servicing	Annually remove and repack bearings on each side of the reel
Mounting	4 x M12 bolts Inlet flange is to suit 75mm (3") TTMA - 8 off 3/8" BSW x 25mm deep blind threads on a 124mm PCD

Aviation Hosereel Cartwheel Style - AHR Series

Cartwheel style hosereel suitable for aviation fuels

The AHR250 series covers a large number of sizes, variations and options.

Generally the reel is available in either open frame design or with side infill panels. The reels are available in various diameters and widths to accommodate a large range of hose diameters and lengths, with or without hose beads / protection rings.

A typical complete assembly also incorporates a hose guide or “chute” and nozzle stowage, to which interlocks are usually added to help prevent drive away accidents and product spills. Rewind options are hydraulic motor, electric motor or hand / manual rewind.

EASY OPERATION Just unhook nozzle and dispense hose to the required location. To rewind hose a manual handle, electric motor or hydraulic motor is used. The hose nozzle storage can be fitted with interlocks to help prevent drive away accidents and product spills.

Technical Specifications

Sizes	Hose size - 1", 1 1/4", 1 1/2", 2" & 2 1/2" nominal bore Rewind type - Manual, electric or hydraulic Cartwheel lining for hoses with wear beads. Please refer to ordering information for more options. Custom design is available.
Pressure	Rated to 2100 kPa
Servicing	Annually remove and repack bearings on the inlet side of the reel
Mounting	Support frame not supplied. Inlet flange is to suit 75mm (3") TTMA - 8 off 3/8" BSW x 25mm deep blind threads on a 124mm PCD
Weight	37kg
Materials	Aluminium cart wheels and drum, nickel plated steel gooseneck and viton seals

Aviation Hosereel Cartwheel Style - AHR Series

Ordering Information

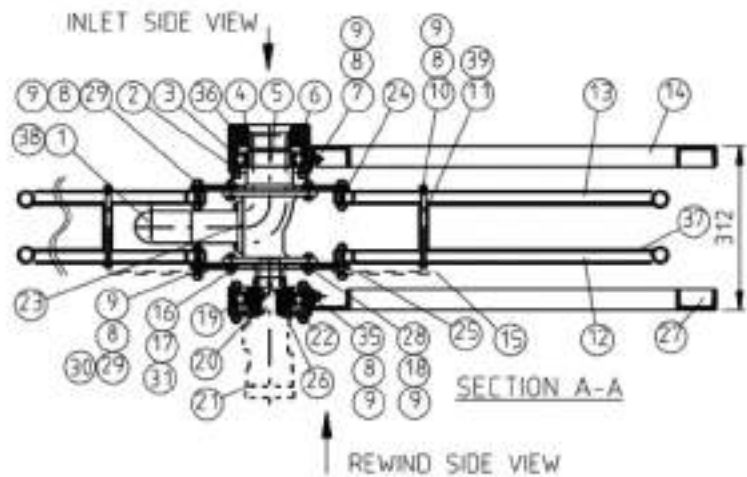

NOTE: Electric available as an assembly

AHR250A Hosereel suits hose sizes from diameter 86mm to 110mm and will accept 2" (50mm) and 2 1/2" (63mm) hoses with hose beads

AHR250B Hosereel suits hose sizes from diameter 56mm to 85mm and will accept 1 1/4" (32mm) and 1 1/2" (38mm) hoses with hose beads, or 2" (50mm) and 2 1/2" (63mm) hoses without hose beads

AHR250C Hosereel suits hose sizes from diameter 25mm to 55mm and will accept 1 1/4" (32mm) and 1 1/2" (38mm) hoses without hose beads

Issue 10 - Aviation Components Catalogue

Hosereel Assemblies - Electric Rewind

Designed for ease of operation in a dangerous environment

Design and custom built hosereel assemblies using electric rewind mechanisms.

These are designed to electrically rewind aviation hose safely in a dangerous environment. This unit will require the operator to provide significantly less force in unwinding the hose than any of its chain driven predecessors, thus significantly reducing the potential for back injury to the operator.

Operation of the unit is simply a matter of pushing the start/stop switch to rewind the hose. The ramp up feature on the inverter allows the motor some time to go from rest to full speed, so fine control is available over the final portion of the hoses journey by toggling the switch to "inch" the hose in.

Features

- The frame is fabricated from steel, is hot dip galvanised and designed to accommodate all components.
- Drive is provided by a 3 Phase, 1.1Kw, Class 1, Zone 1 explosion proof ex-d electric motor and runs through a single-to-three phase variable speed inverter. This provides greater flexibility in speed control. The unit is preset by Liquip. It is capable of "ramping up" to operating frequency, and "ramping down" from operating frequency. These parameters are completely controllable via the keypad located on the front of the inverter.
- Power is transmitted to the reel by an anti-static timing belt. This eliminates the need for a chain drive; therefore no metal-to-metal contact is present. This eliminates the possibility of a spark caused by chain lash etc.
- The anti-static belt eliminates the potential for static caused by belt slippage or sideways float. The belt is tensioned automatically by a spring-loaded tensioner, eliminating the need for constant adjustments.
- To minimise the possibility of catching fingers in the belt drive, the unit may be purchased specifying either a hinged full cover or a belt guard. The hinged cover features a polycarbonate window in the top, and hose roller guides in the front. It covers the entire unit when lowered. The belt guard is a removable profiled guard designed to sit over the driven sprockets and the timing belt. The rest of the unit remains uncovered.

Hosereel Assemblies - Electric Rewind

Ordering Information

CART WHEEL STYLE

DRUM STYLE

Contact Liquip for custom build ordering information.

Large diameter cartwheel hosereels for single wrap hoses with or without hose beads. 38mm or 50mm male BSP thread for hose connection. Check plate diameter made to order, customer to specify required hose size and length and our Engineering Department will specify the right size reel to suit.

Note: The drive for these units will be a 3 phase 1.1kW, Class 1, Zone 1 explosion proof ex-d electric motor driving a hydraulic pump with its own hydraulic reservoir and check valve. This will in turn drive a hydraulic motor via a pressure and return line to the pump.

Nozzles & Accessories

OPW 295SA & SAJ Aircraft Nozzles

The OPW 295SA and SAJ Aircraft Nozzles are used for overwing aircraft refuelling.

Features & Benefits

- Aluminum Body – lighter weight, easier to maneuver.
- Dual Poppets – easy-to-open nozzle against high inlet pressures.
- Color-Coded Composite Lever Guards – helps distinguish between AVGAS and Jet A. Easily replaced in lever guard kit.
- Vinyl-Coated Lever – insulates fingers against cold.
- Dust Cap – keeps spout free from dirt and stops fuel drippage when connected.
- Adjustable Dash Pot – permits adjusting the main poppet closure rate over a wide range of flows to overcome line shock with minimum afterflow.
- Right Angle Design – provides larger lever area for better grip and easier control.
- Easily replaced spout – the spout is easily threaded into the body. Replacement spouts are readily available from OPW.
- Built-In Swivel – eliminates twisting and kinking of the hose. This swivel is electroless nickel-plated and has full-bearing surfaces.
- Unique Jet Aircraft Spout Design of 295SAJ – to help prevent inadvertent fueling of piston engine aircraft with turbine fuel.
- Ground Wire Assembly – included on all aviation nozzles.

Technical Information

Materials

Body: Cast aluminum
Main Stem: Stainless steel
Stem Seal: Buna-N O-Ring
Disc: Viton®
Spout: Aluminum

Design working pressure

110 psi (7.58 bar) maximum pressure.

Threads

NPT Female Threads at Inlet End of 295SA – accepts all 1”, 1-1/4” or 1-1/2” male connections.

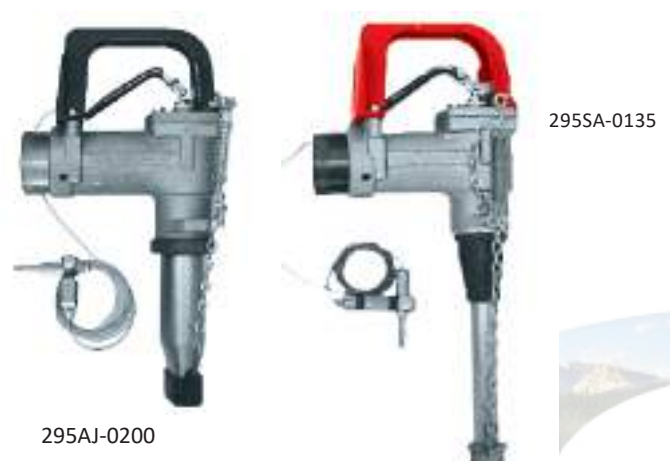

NPT Female Threads At Inlet End Of 295SAJ – accepts all 1-1/2” male connections.

Strainer

100 Mesh Strainer – prevents foreign matter from entering fuel tank; easy to remove and clean.

Elaflex Bowser Nozzle

The ZVF25 1" refuelling nozzle has been the bench-mark nozzle for aviation refuelling for decades. With an internal check valve, 100 mesh strainer and integral inlet swivel.

- Maximum flow rate: 140 litres / minute
- Working pressure: up to 3.5 bar (50 psi)
- Spout: 27 Ø - 1" BSP female inlet
- Operation: Manual shut-off
- Materials: Aluminium body, guard and inlet swivel, stainless steel and acetal internals, Nitrile and Vulkollan seals

Ideal for fuels up to 50% aromatics, alcohols up to 15%, Jet fuels and Diesel
(NOT suitable for viscous oils)

AVN042 Aviation Overwing Fuelling

The Liquip AVN042 has been designed as an easily operated nozzle for (overwing) delivery of aviation fuels. Unlike normal nozzles, it is equipped with “power assist” dashpot operation, making it as light as a service station bowser nozzle. The body, handle and trigger are made from heavy duty, lightweight aluminium. The handle and trigger are easily replaceable and the body has wear ribs to protect when dragged.

- The Spout Adaptor will accept any of the four (4) available spouts.
- Optional Inlet Swivel.
- Seals are compatible with all Jet and aviation fuels.
-

Operation

Pressure-balance design provides for small and constant finger force on the trigger regardless of the pump pressure. The Trigger opens a valve in order to deliver product. The bullet-shaped internal seal opens first, allowing the pressure inside the nozzle to equalise, making it easy to then open the product seal. Such ease of operation permits accurate, fine top-up without any surging and splashing.

Technical Data

- SPECIFICATIONS:** Trigger force constant 60N at midpoint.
38mm (1 ½”) diameter flow through.
Only 50kPa pressure drop at 300 L/min with 32mm spout.
- WEIGHT:** 2.5kg with 32mm spout.
- MOUNTING:** 38mm (1½” BSPP female thread) inlet.
- MATERIALS:** Aluminium body, handle, trigger and adaptor outlet.
Stainless Steel shaft, pin and spring.
Viton and Polyurethane seals.
- DISMANTLING:** Remove capscrew (item 13), unscrew outlet adaptor (item 12). This will give access to all internals.
- ADJUSTMENT:** None.
- ASSOCIATED EQUIPMENT:** See next page.

Nozzle Stowage

The Liquip Aviation Nozzle Stowages are used on virtually all Liquip aircraft refuelling vehicles as well as other non-vehicle or stand-alone aviation fuelling applications.

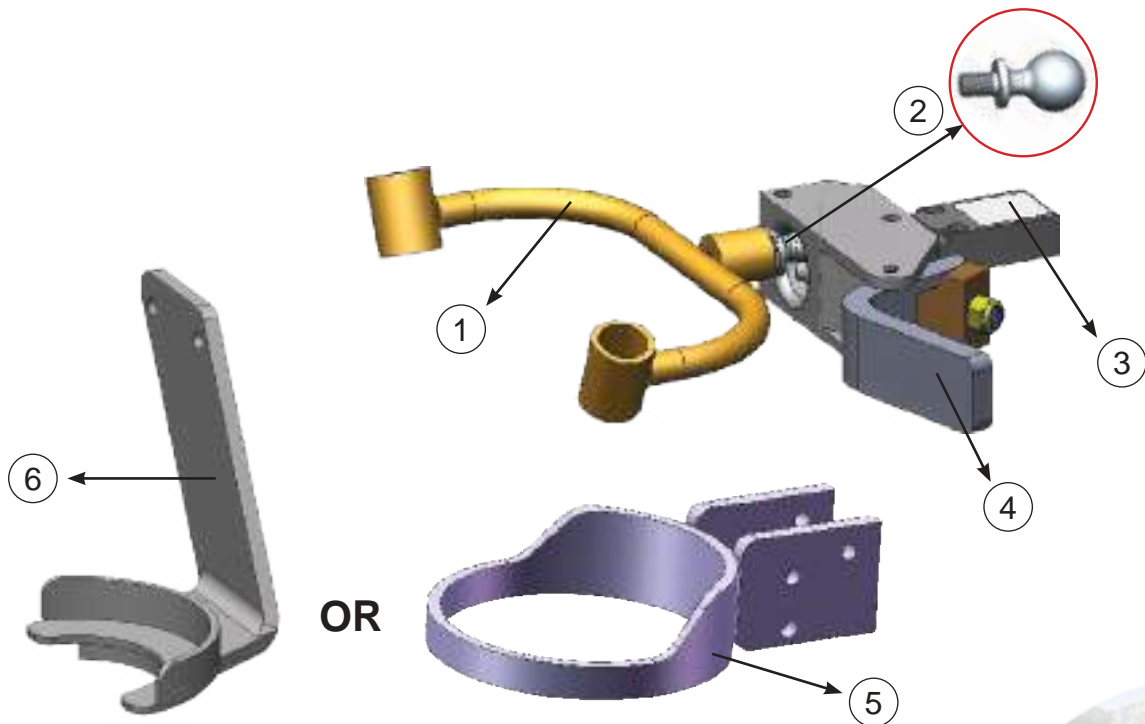

Ball & Socket - Underwing

The Liquip ball and socket nozzle stowage assembly provides safe and sturdy nozzle storage as well as an interlocking mechanism. The interlocking mechanism can be connected to either an electrical interlock switch or a pneumatic interlock valve.

Releasing a nozzle from the socket is made easy using a lever located directly under the socket. This assembly consists of an anodised aluminium alloy body and stainless steel ball to minimise the chance of sparking on contact.

Bottom Load Accessories

OPW EUROLINE SERIES INTERNAL VALVE

CIVACON's EURO100-Line Bottom Valves are designed for increased safety, durability and service performance. The EURO100-Line high flow bottom valves are available as Compact 100-1 series, Super Compact 100-2 series, 4" TTMA or TW 100-3 series and T-shape 100-4 series.

Features & Benefits

- All EURO100-Line Bottom Valves in accordance with EN13308 (Non Pressure Balanced), EN13316 (Pressure Balanced), ADR and API RP 1004.
- Available models: Compact, Super Compact, 4" TTMA or TW outlet and T-Shape.
- Pressure balanced or non pressure balanced operation.
- Sequenced or non-sequenced operation.
- 4" or DN100 connection.
- Lightweight pressure die-cast for improved strength and reduced weight.
- Hard anodized and stainless steel internals.
- Stainless steel filter/strainer.
- Shear Groove to prevent spillage in case of an accident.
- Superior flow rate:
 - up to 2.500 litres/minute.
 - no moving parts in the flow path.
- Viton GLFT seals.
- Valve service inside of the compartment.
- Manually openable in case of emergency.

EURO100-1 Series

Technical Information

Nominal Size	4" or DN100
Working Pressure	5 bar (500 kPa)

Hydrants

A New Generation in Hydrant Pit Technologies

When you buy Liquip products, you're buying a trusted heritage of solutions from the company that's been quietly setting industry standards for over four decades, in Australia and beyond. Our comprehensive line of hydrant pits provide superior operation and easy access for maintenance while meeting the latest EN standard. Liquip can also make double walled steel pits on request.

Our Hydrant pit designs have been proven at airport installations in countries all over the world including: Australia, New Zealand, Singapore and Brazil.

We have taken these trusted designs to the next level and developed an access cover which meets the stringent F900 requirements as part of the EN standard. Even with stricter requirements, Liquip's ingenuity has resolved related manual handling challenges, by allowing covers to be maneuvered easily by one person and with one hand. This is thanks to an easy to use, purpose built tool.

Features Include:

- ✓ **Water Tight Sealing**
Specially designed one-piece construction
- ✓ **Steel or Polyflex Body**
Polyflex: Lightweight option to suit installation restrictions
Steel: Heavy-duty and durable
- ✓ **EN Rated or Lightweight Access Cover Options**
EN F900: 21.5 kg
Lightweight: 15.5 kg
- ✓ **Slip Resistant and Ergonomic Covers**
Keeping ground staff safe
Standard *JET-A1* product ID. Other options: *AVGAS, FH, SV*
- ✓ **Easy One-Hand Operation of Covers**
Less than 25 kg force required thanks to a purpose built tool.
- ✓ **Two Sizes Available**
450mm (18") with inner lid (aperture = 16")
600mm (24") with inner and outer lid (aperture = 23.5")
- ✓ **Latching and Lifting Options**
EN Rated Cover - lifting tool, no lock
Lightweight Cover - locking mechanism with lifting handle
- ✓ **Tethering Options**
Tethering options to meet latest EN and JIG standards
- ✓ **Inlet Flange Kit Options**
Pits can be supplied with steel or stainless steel flanges
- ✓ **100 Litre Capacity (24" PolyFlex Pit)**
Up to 45 Litres before any potential leak point (bellow/riser).

Polyflex Body

Lightweight cover option with lifting handle

PolyFlex Body

A True Breakthrough in Aviation Technology

Easy and Safe Lifting

Liquip's new generation of hydrant pit covers have been proven to be ergonomically safe for men and women to remove and replace.

The design incorporates a lifting point for our specially designed FL7 lifting device. These allow operators to remove the cover without trapping fingers or bending over, maximising the safety of the lifting technique.

The charts on the left show that the safest place to lift or pull a load is close to the body at waist height.

Health & Safety recommendations for load moving capabilities (male) in relation to weight and position.

Hydrant Pit - Polyflex

The future of hydrant pit technology

Liquip Polyflex Hydrant Pit is one quarter the weight of conventional pits, and provides a non-conductive, seamless, advanced-sealing pit. It comes complete with a light-weight lid, offers easy maintenance and improved product retention in case of spills or drips.

This assembly provides an environmentally sealed container for aircraft runways where fuelling and inspection access is required. Generally designed for most industry pit refuelling valves & high/low point drains. The covers and rims have been designed to exceed the extremely high loads & standards set down by the aviation industry.

The durable pit body is a high-tech polyethylene one-piece construction with cast aluminium rim fitted into the body to provide a liquid-tight bond. The Polyflex pit holds up to 100 litres of product with the valve in place and as the bellows is moulded to the body, there are no separate seals.

The body is electrically non-conductive, consumes no cathodic protection power and the sloped bottom ensures fluid build-up in the pit is drained to one side so it is immediately noticeable and easier to clean.

Hydrant Pit - Polyflex

Technical Specifications

Variants:	HPA100, HPA150, HPA200 and HPA250
Pit Body:	High density polyethylene, non-conducting UV stabilised for outdoor storage Working temperature range: - 40 degrees C to 200 degrees C Yield 18Mpa S.G. 0.94 Elongation 450% Flex modules 690Mpa
Pit Rim & Outer Lid:	Aluminium AA601 heat treated and aged T6
Weld Neck:	100mm or 150mm ANSI 150 with fully sealed blind drilled and tapped stud holes, machine finish outside diameter and fastening point for bonding strap. The bonding strap runs from the pipe to the pit rim and is stainless steel.
Integral Bellows:	The integral moulded bellows provides seamless flexibility to accommodate the riser pipe. The 24" pit retains 45 litres before the liquid level reaches the top of the bellows. The bellows has an extended top, allowing variable installation height and surplus can be trimmed back. Entry point is designed for 100mm ANSI 150 bolt pattern weld neck flange with thick flange for improved sealing.
Lightweight Lid:	The HLA100 is the lightest pit lid on the market today which can still withstand the high forces and weights exerted by aircraft as set out in some specifications. It has an automatic self latching feature with single latch mechanism and an anti-slip top. It fits both the 18" and 24" pit (the 24" pit has an "outer lid"). The outer lid on 24" pits can also easily be removed when a larger access area is required for maintenance purposes.
Weight Comparison:	Conventional Steel Pit with Lid, 18" ± 115 kgs Conventional Steel Pit with Lid, 24" ± 158 kgs Conventional Aluminium Lid ± 25 kgs Liquip Lightweight Aluminium Lid, HLA100 ± 13 kgs Total Weight of Liquip HPA200 (24" Pit, 4" Bellows) ± 75.5 kgs Total Weight of Liquip HPA250 (24" Pit, 6" Bellows) ± 85.0 kgs Total Weight of Liquip HPA100 (18" Pit, 4" Bellows) ± 32 kgs Total Weight of Liquip HPA150 (18" Pit, 6" Bellows) ± 32 kgs

Hydrant Pit - HPA250

Ordering Information

A 700mm diameter light weight Hydrant pit assembly with integral bellows to accept a special 150 NB flange, 150NB & 100NB pit valves. The assembly comes complete with both inner and outer covers.

Item No	Part No	Description
1	HLC250	Body Assembly 600mm
2	HLC250-12	Kit Flange for 150mm Bellows
3	HLC200-3	Outer Lid Assembly 450 x 600mm
4	HLC150-10	Clamp for 150mm Bellows HLC150
5	HLC200-10	Seal for Outer Lid Hydrant Pit
9	HLA100	Cover Hydrant 450mm Aluminium
10	HLC200-11	Bonding Kit (Supplied separately)

Hydrant Pit Valves

The Carter Model 60554 Hydrant Pit Valve is a family of valves that includes lanyard, air or dual air/lanyard operated pilot valves, with the latter available with a defueling option. The hydrant pit valve consists of three basic parts, lower valve assembly, upper valve assembly (or API outlet adapter) and the pilot valve. The lower valve assembly contains an isolation valve which will allow the removal and servicing of the upper valve assembly and the pilot valve assembly while the pit valve is under pressure.

The Model 60554 hydrant pit valve is API1584 3rd edition compliant and is designed to minimize the propagation of surge pressure shocks into the upstream piping system during closure of the valve.

Features

- Two-piece upper half standard, replaceable API outlet adapter of stainless steel per API Bulletin 1584. Ductile iron and all stainless uppers optional.
- Standard inlet flange mates with 4-inch 150 lb. ANSI flange.
- Optional inlet flange mates with 6-inch, 300 lb. ANSI flange making valve conform to the IP Standard.
- Closing time is 2-5 seconds.
- Opening time is 5 to 10 seconds.
- Servicing valve standard to provide means to remove the upper valve assembly and pilot valve assembly with the unit under pressure.
- 10 or 20-mesh screen options available.
- All seals are field replaceable.
- Large pressure equalizing valve in the outlet is standard.
- Working pressure – 300psi
- Stone guard optional with 6-inch inlet flange option.
- Ductile iron epoxy coated for corrosion protection
- Main piston well guided to minimise piston seal wear.

Hydrant Pit Valves

Pilot Options

- Model 60554D — Lanyard operated pilot valve for manual on/off control. Valve allows flow in the fuelling direction only.
- Model 60554E — Air operated pilot valve for deadman control. Valve allows flow in the fuelling direction only.
- Model 60554F — Dual air and lanyard operated pilot valve for deadman control and manual on/off control for use in small pits only (12 or 13 inch diameter). Unidirectional only, unless combined with option J.
- Model 60554J — Air operated pilot valve for deadman control with defuel control to allow flow of fuel in either fuelling or defueling direction
- Model 60554-3D — Same as Model 60554D except material of outer housing is ductile iron per ASTM A395 (special order only). The upper and lower valve assemblies are fastened together with 15 metric threaded screws instead of the normal 8-UNF threaded screws (replaced Model 60554-2D). Two piece upper half not available on this unit.

- Model 60554X — Remove the pilots from the Hydrant Valve and replacing it with a sealed male disconnect fitting. As a result you only need to have one pilot for each hydrant servicer rather than one for each hydrant valve, reducing cost. The remote pilot is also sealed and thereby eliminates issues related to the inward breathing pistons in the conventional pilots which can inhale contaminants resulting in internal corrosion and increased maintenance. Fuel leakage into the hydrant servicer’s pneumatic system is also not possible with this design. The remote pilots are compatible with air or fuel command systems.

- Model 60554Y — As per X pilot but with Pneumatic operated “fork” mechanism to eject the remote pilot, effectively making it a dual pilot (part number 47834)

- Model 60554Z — New Dual Pilot (for Pit Boxes 18” in diameter and larger):
Additionally, for those users who require the dual pilot to be permanently attached to the hydrant valve, Eaton now offers a new Option “Z” pilot. This pilot adopts the sealed piston technology from our remote pilots into a compact lanyard mechanism that eliminates issues related to the inward breathing pistons in the conventional pilots. Fuel leakage into the hydrant servicer’s pneumatic system is also not possible with this design.

Existing hydrant valves can easily be converted to any of the remote pilot options. They eliminate all of the common maintenance issues related to contaminated fluids entering the pilot piston area of existing “E”, “F”, or “U” pilots and also eliminated the possibility of fuel entering the pneumatic systems on the hydrant servicer.

Hydrant Pit Valves

New Remote Pilots:

These remote pilots stay attached to the hydrant servicer via the command hose and they can be energized with either air or fuel:

Part number 64230 Simple Disconnect (requires manual lifting of the collar to engage and to disengage)

– OR –

Part number 64280 Push-On Disconnect can be pushed on, but collar must be raised to disengage, or will disengage automatically when pulling the lanyard on the Option “Y”, noted above.

Optional extension handle available on both remote pilots.

Ordering Information

Option letters may be combined with the basic units, except as noted, to customize the valve to fit specific installation requirements. Note basic models referenced on page 2, “Model Descriptions” section.

Option	Description	Option	Description
A	Adds 10-mesh screen between upper and lower halves of the unit (81557-10)	M	Adds dry break (with bleed) to option E, F, J or U air connection (not available on option X)
B	Adds 20-mesh screen between upper and lower halves of the unit (81557-20)	N	Adds adapter kit for installing unit into 12 or 13 inch Avery Hardoll pits with 3 inch ANSI mounting flanges. Can not be used with options G, H, K or L.
C	Adds six-position product selection (44290)	P	Adds 4 inch spool piece to convert inlet flange to mate with 6 inch 300-lb ASA raised face flange (47199). Resultant valve height is 16 inches (special order on 60554-2D & 3D).
G	Adds spool piece to convert inlet flange to mate with 6 inch 300-lb. ANSI flange to meet IP standard (44364) (special order on 60554-2D & 3D)	Q	Changes upper half housing (adapter) to one piece ductile iron (special order - not available on Model 60554-3D)
H	Adds 4-mesh stone guard to inlet. Available only with option G above (43578)	R	Changes upper half housing (adapter) to two-piece ductile iron/stainless steel (not available on Model 60554-3D — special order)
K	Adds adapter kit to D, E or F options only, to mate Avery Hardoll 12 inch pits. Can not be used with option U.	S	Changes upper half housing (adapter) to 316 stainless steel (43214-4) (special order)
L	Adds adapter kit to D, E or F options only, to mate Avery Hardoll 13 inch pits. Can not be used with option U.	T	Adds fusible plug to air port to either E, F, J or U options only (not available on option X)

Example: 60554BDGH — IP standard unit with 6 inch inlet, manually operated pilot valve, stone guard and 20-mesh screen

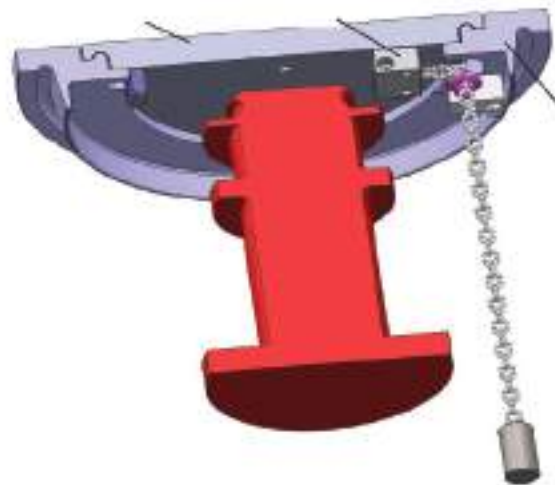

Hydrant Lid Tether

Liquip Hydrant Pit tethering systems are available for new and existing pits. Installation is simple and ensures compliance with JIG Bulletin No.10.

Meters & Pumps

Electronic Meter Register - DFV Series

The DFV100 series is the latest advancement in Liquip’s range of electronics, featuring as a stand alone register or Diptronic CPU.

The DFV101 is a state of the art electronic meter register and level gauging monitor in one compact housing.

The DFV101 allows for increased operational efficiency through a lightweight design and by combining two units into one, users will be able to achieve the benefits of both units by ordering a single unit.

The DFV101 is approved for Zone 1 (IECEX) truck mounted or fixed site product transfer applications..

Key Features

Common to all potted DFV units

- Weights & Measures Approved: NMO UK, NMI-Aust & NZ, Europe - MID & NTEP - USA (EU & USA = Register function only).
- Durable Aluminium housing with hinged door to allow easy access to internal connections.
- Large display to easily view multiple information simultaneously.
- RS232 and CAN communication.
- Intuitive set up and programming.
- Electronic calibration.
- Non-linearity correction.
- Non volatile memory for storing set parameters.
- Operates on 12 or 24 volt installations.
- Backlit display for easy viewing in low light.
- Piezoelectric buttons for reliability.
- Connection to a ticket printer or a third party fuel management system.
- Can be connected to a large digit display
- Micro SD card for easy software upgrades.

Register

- Preset functionality / batch control.
- Solenoid outputs are voltage free and can perform a 2 stage ramp up and ramp down of the fluid flow.
- No flow timer.
- One calibration point with Weights & Measures sealable captive fastener.
- Compatible with most flow meters on the market.
- Pulse output can be programed as optional additional fourth relay.
- Functionally backwards compatible with Liquip EMH registers.
- Flowrate displayed on main screen along with volume during delivery.
- Future expansion and modularity available.

Diptronic

- Automatic level gauging updated in real time keeps users off the top of the tank.
- Same menu system as DIP200 for ease of operation with operators already familiar with Liquip Diptronic.
- CAN output for rapid communication with external device.
- Can read up to 6 probes/compartments.
- Can be used to provide a sealed parcel solution.
- DFV103 comes with built in power filter negating the need for external power filter.
- Can be connected to slave unit to read an additional 6 probes/compartments.
- Volume shown in 1L increments.
- ±1mm accuracy with no moving parts for minimal maintenance.
- Compatible with E 705 Diptronic probes (pots).
- Enables temperature compensated deliveries.
- Enables split deliveries to maximise fleet efficiency.

Safety Approvals (All units)

IECEX

- Safety Approved for use in Zone 1 (IECEX). IECEx TSA 14.0021X Ex e ib mb [ia] IIA T4 Gb IP66 (Ta = -20°C to +60°C)

ATEX

- Safety Approved for use in Zone 1 (ATEX) DEMKO 14 ATEX 1407X Ex e ib mb [ia Ga] IIA T4 Gb IP66 (Ta= -20°C to +60°C) 0518 II 2 (1) G

UL

Electronic Meter Register - DFV Series

Technical Information

Size	Approx, 250 x 200 x 140mm
Displays	1 line x 14 characters 14 mm high and 4 lines x 24 characters 8 mm high
Power Input	9 to 32Vdc (safety approved) or 9 to 45V (operational) @ 250mA polarity protected. In-line fuse (rated 3A, antisurge) is strongly recommended
Operating Temperature	-20°C to +60°C (safety approved)
Temperature Correction	-40 to +60°C for all petroleum products Extended ranges available according to local regulations
Temperature Probe	Pt100 class A, 3 wires, Liquip P/N 4155
Ingress Protection	IP66
Product Density	0.653 - 1.075kg/L (petroleum products) - For others contact Liquip
Weight	Approx. 6kg
Communication	Two RS232C ports to be used to communicate with a PC or other serial device such as a modem or printer. One CAN port. Compatible with Epson CTM-290 or TM-295, Blaster Printer.
Touch PC	Commands that can be interrogated include resetting the meter and requesting the current delivery quantity. See software section for detail.
Pulse Input	Will accept 3-channel pulses of 60° phase shifted, from ERP200 pulser, dual (quadrature) or single pulse (reed or open-collector) from third-party pulsers. Third party pulsers may not be NMI approved
Pulse Output	Open drain, active-low output, signal calibrated to 10 pulses/litre, where the pulse frequency can be set up to either 400Hz or 2kHz max. (with fixed pulse duration 1.25 ms or 0.25 ms respectively).
External Reset	This is an input/output signal.
Relay Outputs	Up to 4 Relay Outputs. Current sink, 3A max. Solenoid to be connected between this output and the positive of the power supply. Additional in-line fuse (3A, antisurge) is strongly recommended.
Program Memory	microSD card

Mounting Instructions

The DFV101 can be either remote mounted or mounted to a meter using an adaptor bracket.

Adaptor Bracket: Front mount to various meters

When direct mounting to a meter is unavoidable

DFV100-23 (Suits the following meters)

- LC - M5, M7, M10, M15, M25, M30, M40, M60
- SAMPI - M5, M7, M15, M30

Adaptor Bracket: Top mount to various meters

DFV100-18 - Top mount bracket to suit meters that use the OE standard 4 bolt register mount.

For mounting to other meters please contact Liquip

+ Approval is only applicable for Register function.

Pulser - ERP200

The ERP200 Series Electronic Remote Pulser is designed to convert signals from a rotating shaft into an electrical signal. The apparatus comprises a printed circuit board (PCB), a metallic mounting bracket and a plastic slotted disk (shaft) all housed in a plastic enclosure. Access to the internal block is via a plastic lid fitted with a rubber O-Ring and mounted with screws.

There are several situations where a remote pulser may be preferred or even required:

- (i) When buying a meter capsule only, with no register or drive and no calibration gears. A remote pulser is much cheaper to buy and much less to maintain.
- (ii) When there is no room to have a mechanical or electronic register mounted on the meter. The remote pulser is much smaller than any register.
- (iii) Using a remote pulser also allows the register to be mounted in a better viewing position.

A solid-state pulse transmitter provides accurate readings at high revolutions for remote applications.

A quality sealed plastic housing is able to operate in a broad temperature range with excellent impact and chemical resistance.

The electronic pulse transmitter has three opto sensors each sensor producing 25 Pulses per revolution, thus producing 150 combinations of pulses per revolution. The pulses signals are used by Registers for measuring purpose.

With three opto sensors, the pulse transmitter can detect:

- (i) Flow direction
- (ii) Faulty opto sensors
- (iii) Loss of power.

Pulser - ERP200

Electrical:

When the application of the ERP200 Series is in areas subject to safety requirements such as oil company operations, it is essential that all legislative, industry and company requirements be thoroughly researched and understood. Not only do these vary from country to country but also there are some 'grey' areas with the operation of vehicles in zoned places such as loading gantries.

All ERP200 Series equipment is certified for Zone 0 installation. Installation shall be carried out in accordance with the applicable code of practice by suitably trained personnel.

Following instructions contain details on wiring and how to avoid interference from extraneous sources. In all cases, use the Liquip power filter as that contains power-filtering equipment to ensure a clean, stable power supply to the electronics.

Electronic boards are a hybrid of surface-mount and through-hole components each being selected according to past experience of reliability and mechanical strength.

Safety Certification:

1. IEC Ex

Certificate: IECEx TSA 08.0043X

Marking: Ex ia IIA T4 IP66

Ta = -20°C to +60°C

2. ATEX

Certificate: TRAC09ATEX11220X

Marking:

CE 0518 I I 1 G

Ex ia IIA T4 IP66

Ta = -20°C to +60°C

Conditions of Safe Use:

1. Input Parameters: $U_i = 26.6V$, $I_i = 660mA$, $P_i = 1.2W$, $C_i = 1.14\mu F$, $L_i = 0mH$.
2. Warning: In Zone 0 only: Electrostatic Hazard. Do not rub. Clean with a damp cloth. Do not use solvents.
3. Port entry: Use suitable conduit or cable gland, min IP66.
4. Any length of connecting cable may be supplied subject to satisfying the L and C parameters of the equipment.

Weights and Measures Approval:

1. AUSTRALIA: NMI S351A, S407

Junction Box - EJB101

Liquip electronic system requires complete integrity of power supply to guarantee data communication is not corrupted. The EJB101 has been produced to provide the complete power interface.

The cast aluminium housing has a weather-proof seal and is Ex 'e' rated. Five ports are provided - one for the supply from the vehicle battery (9v to 30v), one output to supply power and communication to the register and the remaining ports are for the auxiliary devices (such as communication ports, temperature probe, remote pulser and solenoids). These ports may require approved glands and conduit to comply with regulations. The single electronic board is manufactured to Cenelec standard for the intrinsically safe barrier and also provides circuit protection and power conditioning for surge and ripple protection.

The EJB200 is built for intrinsically safe barriers and also provides circuit protection and power conditioning for protection against ripples and surge.

Sampi Meters

Exceptional Accuracy

The SAMPI positive displacement (PD) meters are ideal for tank truck or depot applications. For metering aviation gasoline and jet fuels the Class 2 meter has a nonferrous construction and SAMPI is approved for use by NSC (Australia) and other major international weights and measures regulatory bodies.

Superior Accuracy at constant flow

With all other conditions being constant, the SAMPI meter does not vary more than 0.05% in repeatability over the entire range.

Accuracy over the widest range of flow

The SAMPI meter has an ideal combination of minimum seal or slippage area with lowest pressure differential across the seal. This results in better accuracy over a wide range of flow than available in other type of commercially produced positive displacement meters.

Accuracy regardless of pressure fluctuations

With the SAMPI meter's unique dual-case design, the bearing surfaces of the meter element are internally and externally subjected to the same system pressure. Therefore, the meter element cannot be stretched or distorted to cause changes in seal area that would adversely affect accuracy.

Avery Hardoll BM Series PD Meters

Avery Hardoll bulk meters are precision made, positive displacement, liquid measuring instruments, which maintain accurate metering.

The simplicity of design and construction together with sustained accuracy of an Avery Hardoll bulk meter has led to the widespread use of these meters on aviation refuelling vehicles, in oil terminals throughout the world.

Features & Benefits

- Positive displacement liquid measuring instruments.
- Unequaled performance in measurement to 0.1% accuracy.
- Not affected by outside factors caused by calibration.
- 115 to 3,870 LPM flow rates.
- Accuracy between calibration levels.
- Suitable for use in distribution depots and aviation refueling vehicles.
- Repeatability better than 0.02%.
- Serviceability: designed for quick and easy maintenance

Avery Hardoll BM Series PD Meters

Technical Information

Pressure Ratings	Max working pressure: 150 PSI. Test pressure: 300 PSI,
Temperature Range	-28°C to 100°C.
Maximum Flow Rate	1,370 LPM (82 m3/hr) single capsule. 2,500 LPM (168 m3/hr) double capsule - intermittent. 3,870 LPM (232 m3/hr) triple capsule.
Volume per revolution	2.27 litres (single capsule). 4.54 litres (double capsule). 6.82 litres (triple capsule).
Repeatability	0.02% (typically).
Materials	Manifold: Fabricated steel or ductile iron ductile iron not available on triple capsule meters. Body: Ni-Resist cast iron. Vanes: Carbon. Rotor: Aluminium or Ni-Resist cast iron. Outer Covers: Aluminium or Ni-Resist cast iron. Inner Covers: Ni-Resist cast iron. Bearings: Stainless steel. Seals: High nitrile or fluorocarbon.

Avery Hardoll Electronic Meter Controller

The Avery-Hardoll MASTERLOAD II™ is a versatile micro processor based electronic controller. It is an intrinsically safe system that is ideal for use in Category 2 hazardous areas and is comprised of a pulse transmitter mounted on the meter, a display unit giving readouts of batch volume, flow rate and a totaliser.

Displays of batch delivery, rate of flow and totaliser are given on three large liquid crystal displays that provide readouts of batch volume, flow rate and the totaliser. These displays can be easily configured to show alternative values such as temperature compensated volume and volume to weight conversions.

Additional displays can show repeat or supplementary information at other convenient locations on the refuelling vehicle.

Features & Benefits

- Accurate, dynamic meter calibration.
- Volume to weight conversion.
- Temperature compensation (optional).
- Two-way data interchange to cab mounted data capture systems.
- Interface to deadman system.
- Interface to accessories with 4-20 mA output.
- Flexible installation.

Avery Hardoll Electronic Meter Controller

Technical Information

IP Ratings	All units are designed for outdoor use & are sealed to specification IP 65.	Non-volatile Memory	Infinite data retention.
Security	Full wire sealing. Automatic error checking. Alarm reporting. Data Storage for 40 transactions.	Power Supply	12/24 VDC.
Operating Temperature	-20 to 40° C.	Power consumption	350mA max. (excluding relays).
Transmitter	Temperature: -30 to 120° C. Fitting: Direct drive available. Approval: EN ISO 6551-1995 Level A. Channels: 3 Independent. Security: Sense line.	Relays	Max of 11 plug-in. Typical - 1 Deadman. Pulse output.
Humidity	Resistant up to 100% R.H.	Inputs	4-20mA (4).
Temperature Probe PRT	Accuracy: +/-0.1° C Discrimination: 0.1° C. Range: -30 to 120° C. Set Up: Factory set. Alarm Limits: Programmable. Display: °F or °C. Compensation: 15, 20 or 31.5° C.	Linearisation	1, 2, 4 or 8 selectable. Full dynamic interpolation. Accuracy: +/- .02 @ measuring condition. and 15° C if temperature compensation fitted.
Safety Classification	Category 2.	Manual Input	Density for weight indication.
ATEX Approvals	Power Supply Unit: (flameproof). -II 2 G EEx d IIB T6. -Cert. No. ITS04ATEX11903. Display Unit: -II 2 G EEx ib IIB T4 -Cert. No. BAS02ATEX2199	Product correction tables	IP/ASTM Table Selection to IP65. Generalised crude (A tables). Generalised products. Table 54. Table 53
Delivery Override	Key Operated IP 65 Box (option).	Locations	Flexible mounting: (max 50 meters between units).

Isoil Digital Display - LFD-6

Isoil's new LFD-6 remote display unit has been designed mainly for use on hydrant dispensers and aviation refuellers working at airports. This application requires the volume measured by the PD meter be repeated and easily read from a reasonable distance within the working area.

The LFD-6 nevertheless can be used in any application where the operator is working at a distance from the meter counter and an easily readable display is required. Such typical applications include top loading of tank trucks and rail cars, also loading of barges, ships, etc.

From a metrology standpoint, it is the main meter (and counter) that is the only official metering reference. Therefore, the LFD-6 has to be considered as a simple repeater of the main instrument. The value displayed is received by factorised pulses representing the minimum value to be read (e.g. if the display is required in litres, then 1 pulse=litre). If the LFD-6 is used in conjunction with ISOIL's Vegall or VegaT electronic counter it can be linked via serial line. The LFD-6 has a maximum of 6 digits plus a decimal point that can be programmed in a fixed position. At the end of the delivery the unit can be reset to zero remotely by means of a dedicated input.

The display brightness is achieved by automatic, self adjusting LED which provides very high readability in all lighting conditions. The LFD-6 is suitable for use in explosive areas and harsh environments. ATEX conformity and IP66 protection rating.

Isoil Digital Display - LFD-6

Technical Specifications

Reading:	N° 6 digit 63(H)x30(L) mm– Red L.E.D. high efficiency type+decimal point
Brightness:	Self adjusting according to the environmental conditions
Unit of measure:	At custom choice by means of labels with the main units of measure
Counting input:	From npn/ pnp open collector transistor or square wave 5-15VDC – 5KHz max
Reset input:	From npn/ pnp open collector transistor or square wave 5-15VDC – 5KHz max
Serial communication:	N° 1 line settable as RS232 or RS485 (communication protocol compatible with ISOIL VEGAI e VEGA T electronic registers)
Mains:	10-30VDC
Power:	10 W max
Working temperature:	-25÷55°C
Stock temperature:	-40÷65°C
Relative humidity:	0÷95% without condensation
Housing's material:	Anodised aluminium alloy
Environmental protection:	IP66
ATEX conformity:	For category II 2 G protection mode Ex IIB T6- EC type examination certificate: INERIS 08ATEX0028
Cable entries (standard):	From the bottom, 2 holes ½" NPT
Cable clamps:	In the bottom side, spring terminals for wires 1,5mmq max
Mounting facilities:	N° 6 screwed holes M6x10 on the back and lateral sides for wall or bracket mounting Equipped with silent block supports
Dimensions /Weight:	388x148x49mm / 5 Kg

Gorman Rupp Pump 2"

Most economical and best quality pump

Gorman Rupp pumps are proven performers in reliability. Self-priming centrifugal PTO pumps are ideal for handling aircraft fuels. Designed for truck mounting.

Technical Specifications

- Size:** 2" x 2" (51 mm x 51 mm) NPT - Female
- Casing:** Aluminium Alloy 356-T6
Maximum Operating Pressure 234 psi (1613 kPa)*
- Enclosed Type, Six Vane Impeller:** Aluminium Alloy 356-T6 w/Gray Iron 30 Hub Insert
- Pinion Shaft:** Alloy Steel 4320
- Replaceable Wear Ring:** Copper Alloy C93200
- Removable Cover Plate:** Gray Iron 30, 6 lbs. (3 kg)
- Seal:** Type 21, Mechanical, Self-Lubricated. Carbon Rotating Face. Ni-Resist Stationary Face. Fluorocarbon Elastomers (DuPont Viton® or Equivalent). Stainless Steel No. 18-8 Cage & Spring. Maximum Temperature of Liquid Pumped, 160°F (71°C)*
- Seal Guard:** Brass Tubing ASTM B-135
- Gearbox Housing:** Gray Iron 30
- Gearbox Lubrication:** SAE 90 Gear Oil
- Gear:** Alloy Steel 4620
- Gear Ratio:** 5.69:1 Increase
- Bearings:** Open Single Row Ball
- Flanges:** Gray Iron 30
- Gaskets:** Buna-N w/Cork and Vegetable Fiber
- Hardware:** Standard Plated Steel
- Optional Equipment:** Victaulic™ Elbow

Gorman Rupp Pump 3"

These 3" pumps are used as the product pump on most larger capacity Liquip JET-A aviation refuellers. These Gorman Rupp self-priming product (aviation fuel) pumps are driven by an hydraulic motor on the fuelling module. They pull the product (JET fuel) from the cargo tank and pump into aircraft at around 1,000+ litres / min.

Technical Specifications

Portable Aviation Drum Pump

Liquip Portable Aviation Drum Pump refuelling assembly is a complete frame-mounted package, consisting of:

- A hand pump capable of 1 litre per turn
- Velcon VF31 mini-filter and cartridge
- Static reel with cable and clamp
- Hose - 25mm (1") aviation hose (length to suit customer requirements)
- Nozzle - ZVF25.41 manual 25mm (1") bowser-style nozzle with built-in swivel,
- Strainer, dust cap and earth clamp/pin
- Drum Spear suitable for 200 litre drums
- Ground / earth spike

The unit is mounted in a lightweight aluminium frame designed to be free-standing on top of the fuel drum. Filter monitors are last line in defence against fuel contamination by water and dirt. The monitor vessel contains a 6 inch diameter monitor cartridge designed to indicate (by a rise in pressure differential between the inlet and outlet) a problem with water or dirt contamination. The product is pumped under pressure to flow through the housing inlet chamber and "outside-in" through the monitor cartridge. This specially developed multimedia cartridge configuration traps and holds minute solid particles (to less than one micron) whilst absorbing any water contamination, culminating in shutting down the flow if water is present in any volume.

OPTION:

Electric pump in place of hand pump

Ordering Information

Contact the Liquip Sales Department for assistance in determining which of the numerous models and options available will best suit your application.

Fuel Sampling

Millipore Adaptor

The chrome-plated dry break connection is available with a 3/8" BSPP and includes a dust cap. Mainly used for fuel sampling, they are also suitable for a variety of applications including pressure checking and gauge testing.

For pipework, the extension adaptor length of the unit is suitable for 6" pipework and can be cut down and re-angled for smaller pipe diameters.

Technical Information

Design Pressure: 5,000 kPa.

Aljac Sampler

Environmentally acceptable, operationally efficient and safe, eliminating any product loss

Aljac Closed Circuit Samplers have been designed to permit visual examination and full quality control checking of fuel samples within a closed system. A fuel sample is taken by opening the inlet valve and filling the sampler. Visual examination can be completed and the various checks carried out. When the checks are complete, the drain valve is opened and the sample is released into the slops tank.

The Basic Sampler comprises a glass tube, with hinged, vented cover, a cone-down epoxy coated aluminium base, and drain valve with easily operated handle. Fuel enters through a tangential port to promote vortexing which concentrates any impurities.

Accessories are available to permit all currently established methods of water detection, together with density and temperature readings.

Internally: A holder for either Shell Water Detector (SWD) syringe or the Exxon Hydrokit, for suspended water checking.

Externally: A fitting for the SWD syringe at the inlet to the Sampler, adjustable to any angle for convenience. A sample from this point will accurately reflect the condition of the product from which the sample is being taken.

Operation

A fuel sample is taken by opening the inlet valve and filling the sampler. Visual examination can then be completed and the various checks carried out depending on the accessories fitted. When the checks are complete, the drain valve is opened and the sample released either to a dump tank or back to storage.

Features

- Full visual examination
- Elimination of spillage
- Drain to dump/slop tan
- Accessible for internal cleaning
- Suits Density measurement
- Suspended water checking
- Temperature measurement
- Inlet connections: 3/8
- Outlet connections: 1"

Overfill Protection

Liquid Detection Probes - LDP Series

Liquip LDP series optic overfill sensors raise the bar in safety with true fail safe technology & individual ‘optic-on’ light.

Liquip’s LDP200 Series liquid detection probes are used as overfill protection on road tankers and in storage tanks. The probes are compatible with existing gantry monitors and interchangeable with current probes. They improve safety with a self-checking design. Probe can be checked for operation independently.

Sensing mechanism used is the different behaviour of a light beam in a glass prism when the prism is wet instead of dry. There is a very large difference in refractive index of air compared with petroleum liquids and this difference provides a very well defined and reliable switching point. With the probe dry, the light beam reflects back internally in the prism and in liquid the beam is refracted out into the liquid and “lost”. Electronics in the probe are designed to create the light beam, detect its return or disappearance and pass that message to the Rack Monitor for appropriate response.

Technical Specifications

Electrical Parameters:

IECEX:	Ui = 30V, li = 690mA, Pi = 9W, Ci = 105pF, Li = 0mH
Operating Temperature:	-40°C to +65°C
IP Rating:	IP66
Level Repeatability:	±0.5mm
Design Pressure:	600kPa

Power Limit (Pi = 9W) applies:

li max = 690mA when Ui max = 13.04V OR
li max = 300mA when Ui max = 30V

Safety Certification

Liquid Detection Probes - LDP Series

MATERIALS	<ul style="list-style-type: none"> Aluminium probe body, retainer & extension OR Stainless steel body, retainer & extension, Pyrex glass prism, and epoxy. Viton o-rings OR FFKM o-rings
MAINTENANCE	Irreparable item, no routine maintenance required, replace with new if found faulty.
INSTALLATION	<ul style="list-style-type: none"> It is the requirement of the ATEX Approval that the probe is installed in such a way that the probe is Electrostatically Grounded. Install the grub screw in PJB500, PJB301 & VOH200-5 kit for this requirement. It is recommended to use Liquip PJB500, PJB301 or VOH200-5 Probe Holder which is compatible with Liquip manhole covers. Probe can be removed from tank top without having to access interior to remove a hood. Installation should be in accordance with APPLICABLE standards SUCH AS EN60079-14 and EN60079-25 or IEC60079-14 and IEC60079-25 or ANSI/ISA RP12.06.01 and ANSI/NFPA 70 or CSA C22.1 Part 1, Appendix F or EQUIVALENT. Users shall avoid ignition hazards due to impact or friction on the apparatus when used in Zone 0 areas. Any free ends of cable not terminated shall be appropriately terminated to ensure no contact with additional sources of power is possible.
WIRING METHOD	<ol style="list-style-type: none"> 2 - Wire System for LDP202, LDP202SS and LDP202SC Attached drawing shows a typical 6 channel compartment system based on Australian Standard. For 8 channel compartment system ask Liquip for more details. 5 - Wire System for LDP205, LDP205SS and LDP205SC Attached drawing shows a typical 7 compartments tanker, the number of probes varies with the number of compartments in the tanker as the probes are connected in series.
OPERATIONAL PARAMETERS	<p>Liquid properties must conform to the following:</p> <ul style="list-style-type: none"> Have refractive index between 1.10 and 1.47. If in doubt, carry out test with sample of liquid at working temperatures. Not be reflective (e.g. milk will not trip probe as white reflects) Be non-gelling and remain liquid at all operational temperatures. Viscosities up to 3500 cSt, work without suffering from clingage. No particles in suspension which can form clinging opaque surface coating on prism. Use with standard petroleum products and water-based compounds only. Any other chemical content must be checked with Liquip. Not allow sunlight to access prism during operation. Not install probe, or carry out routine tests adjacent to any reflective surface. (Incident light and reflections may cause false readings)
HANDLING PRECAUTIONS	<p>Treat with care in particular protect tip until probe is installed. Protect open end of probe from moisture and chemicals. The probe prism is protected and light-shielded by the retainer.</p>
ACCESSORIES	<p>Extension bars of aluminium or stainless steel to suit various length applications. The following extension bars can only be used:</p> <ul style="list-style-type: none"> LDP102-4 (80mm long) LDP102-4SS (80mm long Stainless Steel) LDP102-8 (Gauged, 80mm long) LDP105-2 (222mm long) LDP105-2SS (222mm long Stainless Steel) Note: LC99 extension bar is not compatible.

Probe Holders

Probe Holder - PJB500

The PJB500 is a walkway or manhole cover mounted overfill probe holder.

It includes 2 x M20 conduit thread ports.

The PJB500 provides a protected, clean and dry environment to mount overfill probes to tanker walkways.

Specifications

- Housing can be mounted through a hole and sealed with the locknut or screwed directly into a M60 X 2 thread.
- By removing the top cover, access can be gained for height adjustment of the probe or to the wiring connections.
- The body has two M20 x 1.5mm entries. This eliminates the need to mount a tee with cover in the conduit line. This will allow for better connections and easier fault finding.
- The probe can be adjusted by loosening the internal capscrew to release the clamp and sliding the probe up or down to the correct sensing height.
- Will accommodate probe diameters of 24mm (such as Liquip LDP style).
- Plate thickness for mounting is from 4 to 17mm.
- Overall height when mounted is 96mm, overall diameter is 110mm.
- Housing rated IP66.

Probe Holder - VOH200-5

The VOH200-5 is a lightweight aluminium junction box for direct mounting to “VOH” manhole covers, or via a weld flange VRB-13 direct to the tank top.

On Board Monitor

The Liquip/OPW ROM III (Model Series 3308-LIQZ) is a liquid cargo mounted On Board Monitoring (OBM) System providing intrinsically safe connections for sensors mounted in the top and bottom of each tank compartment.

The ROM III monitor detects and communicates the sensor status and overall unit's "permissive to load" (the tanker) status to a loading rack monitor via its socket outputs. The ROM III is powered by connection to the truck battery.

Specifications

Max Voltage: 30VDC

Max Current: 1.0A

Ambient Temperature range: - 40 to + 70 Deg C (IECEX)

Temperature class: T4 (IECEX)

Gas Group: IIB (IECEX)

Ingress Protection: IP54

Materials of Construction:

Certification: EN IEC 60079-0: 2018; EN 60079-11: 2012; EN 60079-15: 2010; FM approved and IECEX approved

Valves

Non-Return Valves - NRV80

LIQUIP NRV80 sandwich type non-return Valve is typically fitted between standard 3" TTMA or 80mm DIN pipeline flanges, predominantly in aviation Refuellers. Special contoured and shaped valve to allow minimum pressure drop under full flow condition. Immediately after the flow ceases the valve shuts, preventing product from draining back down the pipeline.

However should a pressure build up occur due to temperature increase and expansion, the valve is fitted with a small thermal relief valve to guard against over pressurisation.

Technical Specifications

- Special Features:** No gasket required. O-rings are used for positive sealing. Thermal relief valve. Full flow.
- Materials of Construction:** Aluminium body, poppet, spider and washer. All viton seals and o-rings. Stainless steel shaft screws and springs. Suitable for aviation fuel.

Main poppet opens at a pressure of 0.9 kPa.
Vacuum poppet opens at a pressure of 350 kPa.

Tank Compartment Internal Drain Valve

The ITV1-AO 25mm internal valve with integral elbow, has been designed for use on aircraft refueller tankers which have small sample or drain lines. The normal fitting in the sump is a 25mm BSP socket. Flow is outwards only. The elbow incorporates a shear groove above the pipe attachment aperture to ensure a breakaway (in the event of damage) at that point.

Valve poppet, spring and shaft are all attached above the shear point to ensure the continued containment of product in the tank. In the event of fire the air line will soften at 80 degrees C and release any air in the system and close the poppet.

Gauges

Shultz Differential Pressure Gauges

Schultz Engineered Products Model SC-5150 Direct Reading piston type differential pressure indicator is designed to accurately and reliability read differential pressure across filter vessels. The gauge consists of a spring corrosion resistant piston moving inside an annealed glass cylinder. Differential pressure is easily read from the top of the piston.

Key Features

- Glass Cylinder Pressure tested to 1200 psi, To provide a safety factor of 4 at max operating pressure of 300 psi.
- Thermal expansion characteristics of piston and cylinder are matched so binding does not occur during temperature variations.
- Eliminates 3 way manifold and subtraction method of determining differential pressure.
- Design provides automatic dampening against pressure fluctuations so calibration will not be affected.
- Easily changed 10 micron filter on high pressure side of gauge protects internal components.
- Housings available in black anodized aluminum or stainless steel.
- 0-15 psi or 0-30 psi Differential Pressure indication ranges available.
- Extremely Rugged housing protects internal components, acceptable for sustained vehicle usage.
- Optional flush mount unit available for panel installations.

Technical Information

- **Pressure:** 300 psi max operating.
- **Temperature:** -40°C to + 71°C (-40°F to + 160°F).
- **Accuracy:** Accurate within 1/2 psi.
- **Fittings:** 1/4" NPT.
- **Seals:** Viton.
- **Materials in Contact with Fuel:** Aluminium, Stainless Steel, Glass, and Viton (for S/S model delete aluminium).

FACET Filtration

Liquip are an authorised distributor of Facet Filtration products. FACET is a global leader in aviation fuel filtration with more than 75 years of industry experience. Over this time, Facet have been on the forefront of aviation fueling for commercial and military aircraft.

FACET manufactures and markets filter housings, filter cartridges and complete filtration systems for hydrocarbon filtration and separation.

Liquip can design and manufacture filter vessel using Facet elements to ASME or Australia standards. The elements used in our vessel are qualified to the latest Energy Institute (EI) Standards for Aviation Fuel Handling. This means you can rely on our products to help you maintain clean, contaminate-free dry fuel. Our team of experts will ensure that you meet the most stringent performance and reliability requirements.

FACET Filtration - Aviation Filter Cartridges

Key Facet Elements offered

CAA Coalescer Series - Qualified to 6th Edition of EI 1581, Category C

This standard line of high flow coalescer cartridges removes ultra-fine solids and enhances separation of water from aviation fuel.

- Maximum water coalescence
- Withstand in excess of 75 psi (5.25 kg/cm²) differential pressure
- Designed to fit Facet HCS & VCS housings

CM Coalescer Series - EI 1581 6th EDITION CATEGORY C

This line of high flow coalescer cartridges removes ultra-fine solids and enhances separation of water from aviation fuel.

- Qualified to 6th Edition of EI 1581, Category M
- Multi-layered media for increased solids holding capacity
- Maximum water coalescence
- Withstand in excess of 75 psi (5.25 kg/cm²) differential pressure
- Designed to fit Facet HCS & VCS housings

SS Aviation Separator Coalescer Series - (EI 1581 6th EDITION CATEGORY C)

The SS-5 Series Synthetic and ST-5 Series Teflon® separator cartridges are cleanable and reusable. They come in a variety of dimensional and end cap configurations. Facet's SS-5 Series Synthetic separator cartridges feature a specially developed treated hydrophobic media.

- Cleanable and reusable
- Superior water barrier
- Recommended maximum operating temperature: 240°F (115oC)
- pH range from 5 to 9
- Flow direction: Outside to in

FG Series - 2" Aviation Monitors (Qualified to 7th Edition of EI 1583)

The Facet 2" (51 mm.) nominal outside diameter FG Series Fuel-Gard® monitor cartridges perform three jobs—they absorb free and emulsified water, remove ultra-fine solids and shut down system flow when hit with a localized slug of water, giving you clean, dry fuel.

- New conductive end caps with anti-static properties
- Structurally withstands a minimum of 174 psi (12 kg/cm²)
- Designed to fit Facet HFG & FGH 2" monitor housings

FG Series - 6" Aviation Monitors (Qualified to 7th Edition of EI 1583)

Facet's 6" nominal outside diameter FG Series Fuel-Gard® monitor cartridges perform three jobs to give you clean, dry fuel: absorbing free and emulsified water, removing ultra-fine solids and shutting down system flow when hit with a localized slug of water.

- Structurally withstands a minimum of 175 psi (1,200 kPa)
- Not adversely affected by exposure to temperatures varying from -40°C to 71°C.
- Works in the presence of surfactants and fuel additives but not those fuel containing anti-icing additive

FACET Small Filter Housings - VF-21 and VF-22 SERIES

Facet Filter Housing VF-22SB-PG

Eliminate the need for other water defense devices and receive maximum water removal, solids holding capacity and shutdown protection to assure clean, dry fuel delivery while meeting the effluent fuel requirements of the latest Energy Institute (EI) specifications.

Economical, compact housings for superior inline filtration protection when used with Facet's standard 21 or 22 Series filter cartridges to remove solids from aviation fuels. Both the exteriors and interiors of the Facet 21 and 22 Series filter housings carbon steel bodies are epoxy coated to protect against corrosion. These sturdy, single cartridge housings are easy to maintain and require only 2" (51 mm) base clearance for cartridge change out.

Key Features

- Sturdy single cartridge housing
- Carbon steel body
- Aluminium head
- Epoxy coated internally and externally
- Swing bolt quick open closure
- Vent and drain connections with brass petcocks provided
- 1.5" (38mm) NPT inlet and outlet connections
- Design pressure: 150 psi (10.5 kg/cm²)
- Recommended maximum operating temperature: 240°F
- Maximum differential pressure: 75 psi
- pH range from 5 to 9
- Flow direction: Outside to in

Associated Cartridges

- Model FG-0-609 series
- Model FG-0-612 series

ILS400 In Line Suction Strainer

ILS400 is a lightweight, inexpensive aluminium suction line strainer for larger pumps such as those fitted to large vehicles and prime movers for bulk industrial deliveries. It suits 76mm and 102mm diameter flow.

ILS400 in line suction strainer protects down stream equipment such as meters and pumps from debris and foreign objects. Strainer basket can only be fitted for correct direction of flow. Drain bosses provided in body and lid to suit any mounting angle.

Technical Specifications

Materials of Construction:	All metal construction. Cast aluminium body & lid. Steel mesh with aluminium surround. Nitrile seal. Available to aviation standard on special order.
Technical Data:	Maximum vacuum to 90kPa Maximum working pressure to 700kPa
Weight:	4.7 kg
Mounting:	4" TTMA flanges Mount with arrow in correct flow direction
Associated Equipment:	LBV4 50 butterfly valve BF4-SG-40, BF4-SG-25, sight glasses
Dismantle:	Simply remove lid by unscrewing 2 off lid retaining nuts and remove basket

Basket Strainers

It is generally accepted that the presence of foreign matter in fluid handling systems is highly undesirable and can lead to the premature failure of critical high value items of equipment, such as pumps and meters. The installation of Basket Strainers is therefore highly recommended and widely practised in these systems.

The Basket Strainers offer the end user a very low pressure loss under high flow conditions and an extended operational life. They are supplied with a quick release lid as standard, and this feature allows the basket to be removed quickly with no special tools, hence minimising the downtime during basket cleaning. Basket removal is possible without the unit being fully drained. The lid is sealed with an O-Ring which gives the lowest possible clamping force with no gaskets required, and there is a side drain point to allow rapid drainage of the contents.

Features

- Cast Carbon Steel Body
- Rugged High Strength Design
- Stainless Steel High Capacity Low Pressure Loss Basket
- Choice of Basket Mesh Sizes
- PED Compliant
- Quick Release Lid, no special tools required for Basket removal
- Side Drain Point
- O-Ring Lid Seal, No Gaskets
- Optional Differential Pressure Tapping
- Optional Automatic Air Vent Valve

Specifications

Standard:	PED/97/23/EC
Design Pressure:	20.0 BarG (290 psig)

Elaflex Rubber Expansion Joints

Electrically conductive flexible connections for pressure or vacuum

In fluid handling systems it is often necessary to make allowance for pipework expansion, vibration and slight misalignment. A multi-purpose solution to many of these problems is the Elaflex rubber expansion joint.

It compensates for stresses arising from these thermal variations or misalignment, substantially dampening vibration from associated plant such as pumps, compressors, etc. preventing the transmission of objectionable noises.

Rubber expansion joints have been proved in service for many years and are approved by a number of Authorities.

The TW YELLOW range is commonly used on aircraft refuelling units

Technical Specifications

Recommended for:	Hydro-carbon products with less than 50% aromatics.
Tube:	Seamless Nitrile NBR., oil resistant for temperatures up to + 100°C.
Cover:	Neoprene, electrical-conductive, oil resistant and weatherproof.
Flanges:	Forged aluminium.
Electrical Resistance:	Between 1k Ohms and 1Meg Ohms.
Max. Working Pressure:	10 Bar.
Test Pressure:	16 Bar

Swivels

SJF Flanged Swivels

The SJF Swivels are available in 4" size and provide rotational coupling of loading arm and hydrant cart components. SJF swivels are cast stainless steel. Sealing is enhanced by the purpose designed Viton primary face seal, and two Viton O-rings which isolate the bearing pack from product leaks.

In the unlikely event that the primary seal leaks, the product is contained by the O-ring before it can wash grease from the bearings causing them to fail in operation. Any leak is also immediately visible from a tell-tale weep hole. The greasing system incorporates the Liquip trade-mark pressure relief outlet to ensure correct lubrication, by ejecting old grease and particles that can cause wear. The 4" swivels have 4" TTMA flanges.

Ordering Information

Part No	Description	Material
SJF101L	SJF 4" Flanged Swivel with 4" TTMA flanges	Stainless Steel

VNS Swivels

The VNS-A4 is a 100mm (4") straight single-plane cast aluminium swivel with 4" TTMA flanged ends allowing 360° rotation. It may be used on any application where another plane of rotation is required.

For example it may be used on loading arms instead of the coupler spool to enable rotation of the API coupler. Liquip's grease relief system (grease nipple one side with relief valve mounted opposite for efficient removal of old grease and debris) extends the life of the swivel by ejecting old grease and wear particles. Dual O-Rings are for product seal and dust seal respectively.

Ordering Information

Part No	Description	Material
VNS-A4	4" Straight Single-plane Swivel with 4" TTMA flanged ends	Aluminium

Swivels

SJW Weld-On Swivels

SJW Swivels are available in 3” and 4” sizes and can be of Mild Steel or Stainless Steel. These swivels are used for fabrication of loading arms and pipework requiring up to 360° rotational joints. They are machined from Nitrided Steel with pre-prepared ends for welding directly to pipe or tube.

SJW Swivels are a most cost-effective way of achieving a rotating joint, for loading arms or other equipment requiring swivelling joints. Sealing is enhanced by the purpose designed Viton or Teflon primary seal, and two Viton o-rings which isolate the bearing pack from product leaks. In the unlikely event that the primary seal leaks, the product is contained by the O-Ring before it can wash grease from the bearings causing them to fail in operation. Any leak is also immediately visible from a tell-tale weep hole. The greasing system incorporates the Liquip trade-mark pressure relief outlet to ensure correct lubrication, by ejecting old grease and particles that can cause wear.

Camlocks

The standard range of Camlocks are to NATO specification MIL-C-27487. Aluminium construction, all units confirm to Australian Code of Practice CP23.

Aviation Selective Couplings

The aim of these units is to ensure that all dedicated aviation road tankers fitted with selective couplings are compatible and can be loaded ONLY with aviation fuels, and that all aviation receiving points can ONLY accept aviation fuels from the dedicated road tankers.

The Liquip range of dedicated couplings provide product selectivity between Avgas and Jet Fuel and are available in the following configurations:

- Top and bottom loading
- Gantry loading valve
- Road tanker API valve
- Road tanker API to camlock adapter
- Female camlock hose end fittings
- Male camlock receipt point fittings

The standard range of Camlocks are to NATO specification MIL-C-27487. Aluminium construction, all units confirm to Australian Code of Practice CP23.

Notches and pins are used to dedicate these couplings for use with Aviation Gasoline or Aviation Turbine Fuel, thus preventing the wrong product being loaded into the wrong tank.

Ordering Information

Contact the Liquip Sales Department for assistance in determining which of the numerous models, sizes and options available will best suit your needs.

Static Reels

LSR100 Lockable Static Earthing Reel

Static reels are used to bond two pieces of equipment to allow static charge to be safely equalised. Static reels are typically used when product is transferred from one tank to another e.g. when pumping between a tanker and storage tank or when fuelling aircraft.

Liquip offers the LSR100, which has been developed to provide users with a safe and reliable static earthing reel that when locked won't inadvertently unwind while a vehicle is moving.

Technical Specifications

- Nominal reel resistance is 5 ohms
- Meets AS 2809:2 – Maximum end-to-end resistance of 10 ohms.
- Carbon brush runs in sealed section to eliminate dirt and corrosion.
- Shaft has grease reservoir for all-of-life lubrication.

SR202 Static Earthing Reel

Static reels are used to bond two pieces of equipment to allow static charge to be safely equalised. Static reels are typically used when product is transferred from one tank to another e.g. when pumping between a tanker and storage tank or when fuelling aircraft.

Liquip offers the SR202, which has been developed to provide users with a safe and reliable static earthing reel.

The SR202 has a large drum so that it can be wound quickly and is fitted with a cable guide.

Technical Specifications

- Maximum end-to-end resistance 2 ohms.
- Carbon brush runs in sealed section to eliminate dirt and corrosion.
- Shaft has grease reservoir for all-of-life lubrication.
- Can hold up to a max of 76m standard PVC coated wire (4mm diameter)

Static Reels

Ordering Information

Static Reel SR Series	
Part No	Description
LSR100	Lockable static reel complete with 30m cable and bonding clip.
SR202	Large diameter static reel comes with cable guide, manual operation
LR203	Large diameter Lanyard reel c/w 15m ORANGE cable & dog-clip

Static Cable and Clamps

Liquip have a large range of static reel accessories available.

EKG1200

KK100

9170

Static Clamps	
Part No	Description
EKG1200	Static cable & aircraft clamp/clip - Solid heavy duty brass clamp complete with 1.2m of cable
KK100	Static clamp - Heavy duty solid brass clamp
9170	Static clamp - Standard plated steel with teeth jaws
GTP-1101	Static clamp - Aluminium alloy clip to MIL-C-83413/7, jaw gap 2mm fully closed
GTP-1097S-1	Aircraft grounding pin - Stainless steel

Static Cables	
Part No	Description
SR100-18	Static cable 2mm - Galvanised wire 6x7 strand, yellow PVC coated (1,00m roll or cut lengths)
9457	Static cable - Stainless steel wire, reflective orange PVC coated (300m roll or cut lengths)

Static Reels

LSR100 Installation Guide

Good electrical conductivity at the mounting bracket is essential to the performance of the static reel.

The mounting bracket itself must be chosen for its continuity with the vehicle chassis and both sides of the mounting bracket must provide a clean, smooth, bare metal surface of at least 15mm radius from the centre of the 13mm diameter hole. Ensure the inner nut is tightened securely on the shaft and fasten the assembly with the outer nut and spring washer on the other side of the mounting bracket.

For LSR100 fitted with the optional spacer and cable guide, fit onto the shaft first and tighten with the inner nut. The entire reel is then secured to the mounting bracket by the spring washer & outer nut on the other side of the bracket.

Further earthing continuity may be obtained by fitting a ring terminal and wire (not supplied) between the fixed nut and the mounting bracket and running it to a second earthing location on the chassis. Using a multimeter, confirm resistance from clamp to chassis is less than 10Ω.

Aljac Continuity Tester

Safe, reliable and cost effective loading of fuel

The Aljac Continuity Tester (ACT) is a foolproof Go/No Go device which can be used by non-skilled personnel, and it is controlled by a microprocessor which offers significant operational advantages. It self checks calibration and available battery power and only then allows the test to proceed. The ACT uses a single dual colour light emitting diode (LED) to indicate the condition of the bonding system under test, which makes the results very simple to interpret. The default set point is 25 Ohms which is in accordance with the JIG Guidelines for aviation fuel systems, but alternative set points can be specified at the time of order placement. In addition, throughout the test, a two figure digital display tells the operator the actual system resistance (in Ohms).

The ACT housing is ergonomically designed to be comfortably held in the hand and is moulded from impact resistant Polyamide, so it is lightweight, robust, and is highly portable. The ACT incorporates a sealed, non rechargeable, high capacity battery which gives it an extended operational life, but the battery life is further enhanced by a number of power saving features. The ACT does not have a constant power usage, it checks the resistance 200 times per second. Also, the microprocessor automatically switches off the ACT after a time out period at any stage of the operation, even if the clips are left connected or touching at the end of the test.

The ACT can be supplied with a calibration certificate if required, but in any event it self checks calibration before every test. The ACT incorporates a current limitation feature and is safe for use in hazardous areas, unlike many other devices which are currently in use. We can provide a Stowage Bracket which can be used to neatly stow the ACT when not in use, or can hold the ACT securely during testing.

Technical Specifications

- Type: Go-No Go Continuity Tester
- Set Point: 25 Ohms (default). Option 1 to 40 Ohms
- Test Frequency: 200 tests per second
- Display Update: Every 100 tests (0.5 seconds)
- LED: Dual colour high intensity (Red/Green)
- Display: Two digit 7 segment LCD, 12mm character height. Selectable on or off
- Housing: High visibility orange impact resistant PA6 Polyamide
- Battery: Lithium Thionyl Chloride 3.6V
- Microprocessor: Atmel AVR EXMEGA 16A 4U
- Flying Leads: 2 x 0.5 metres long, with plugs/clips

Smartwire PLC

With Liquip SMARTWIRE system the options are virtually unlimited.

The SMARTWIRE system is a 2-wire programmable control system designed to simplify implementation and installation. The system consists of input and output modules, a power filter and an interface board.

With the SMARTWIRE system a majority of the operational functions of fuelling aircraft are transformed to electronic form. The system is extremely flexible, offering easy adaptation in the field, if required, without costly modifications.

The SMARTWIRE PLC ensures that all fuelling operations cannot be overridden by an operator and it features a time-out which ensures the “deadman” is present in the operators hand at all times. The same PLC also controls all interlock functions for nozzle stowage, deck lowering, P.T.O. and all bottom load gates.

Liquip individually program each PLC to suit customer requirements.

Power Conditioner

This LIQUIP DCC100 is an electronic Power Filter which conditions power to Electronic Meter Register systems (EMH*), Overfill systems (such as Diptronic® DIP200) etc on Liquip aviation Refuellers and Hydrant Dispensers (where fitted) to protect connected equipment from surges and voltage spikes generated by vehicle operation. One DCC100 is required for each unit (piece of equipment / component) being protected.

Technical Specifications

Materials of Construction:	Heatshrink, plastic, metal.
Mounting:	The DCC100 is not designed to be exposed to dirt or moisture. It must be either mounted in the cab area, typically in the fuse box, or inside a junction box of IP rating 66 minimum (Liquip JBL100 or similar) <ul style="list-style-type: none"> • Ensure cable glands are rated for a minimum IP66. • Wire as per wiring diagram attached. • Ensure IP66 rated blanking plugs are used in any unused holes in junction box.
Weight:	0.1 kg (without junction box)
Input Voltage:	9V-36V DC
Output Voltage:	12V DC
Maximum Load:	Total 1.67A Continuous
Voltage Spike Protection:	Protect up to 50V/100ms spike
Output Voltage Noise:	Less than 0.1V
Recommended Fuse Rating:	3.15A slow blow
Cable Size:	0.2– 2.5mm ² , strip length 6mm
Ingress Protection:	IP20
Dimensions:	55W x 65L x 25H (mm)
Associated Equipment:	DIP200, DIP240, EMH5xx, EMH6xx, MPP102, PPM300 Series, COP Series JBL100 Junction box IP66 with 3 x M20 holes

Power Conditioner

Deadman Assemblies

Excellent operator comfort

Deadman system is a safety device with intrinsically safe wiring that confirms a critical operation is constantly supervised. Liquip deadman handles are compact, durable and designed for maximum operator comfort. They contain a sealed micro-switch (enclosed in the handle) with a cable connection. The handles require low operating force and are wear resistant. They are designed for the aviation environment and easy to assemble/disassemble. The bright orange “curly” lead is 3.4 metres (14’) long and will stretch to 18 metres. Longer cables are available on special order.

Ordering Information

Deadman Assemblies	
Order No	Description
8422	COMPLETE Assembly 1 (ALUMINIUM Deadman complete with cable / curly cord)
GTP-8392-Z-50	COMPLETE Assembly 2 (PLASTIC Deadman complete with cable / curly cord)

Deadman Spare Parts		
Item No	Part No	Description
1	DMH100	Aluminium Deadman - Handle ONLY
2	8693	Cable / Lead (curly cord), orange, 3.4m.
3	9097	Cable plug Male sealed 2W
N/A	DMH102	DEADMAN HANDLE AL WITH CABLE C/W MED Cable

Decals & Signage

Liquip carry an extensive range of fuel handling decals and labels. All decals are printed on top quality decal stock for long life in all conditions. Engraved operational signage is laser cut.

AVGAS & JET A-1

Pipeline markers are available in 57mm & 100mm. Other variations are also available to suit Oil Company requirements.

CLASS SIGNS

Type 1 to 9. Available in metal or adhesive vinyl.

Ordering Information

Part No	Description
2270	Class 3 sign
2272	Holders for class signs in pressed steel (zinc plated)
9906	No Smoking Sticker (220 x 220mm)

Spill Management Products

Contain any spill by having everything you need for fast, efficient response on-hand. In areas where spills are likely to occur, the Liquip range of Spill Kits takes the guesswork out of clean-up. Refills are available for all kits.

Custom Kits

Liquip have spill kits for a wide variety of applications. If you have a special requirement, Liquip can design a kit to fit your needs and budget. "SELECT" absorbs oil / petroleum products while repelling water.

Also Available: Large Drum kits, Booms (various sizes), Folded Rolls, Absorbent Mats

Zippered Truck Kit (15" X 18" X 6")

CONTENTS	SELECT
Socks	(3) 3" x 48"
Sheets	(30) 17" x 19"
Absorbs	28.4 litres

Duffel Bag Kit (29" X 13" X 12")

CONTENTS	SELECT
Socks	(3) 3" x 96"
Large Sheets	(25) 17" x 19"
Pillows	(2) 15" x 25"
Disposable gloves	1 pair
Disposable bags	2
Absorbs	64.35 litres

Spill Containers

These fully sealed Spill Containers are lightweight, strong and resistant to most chemicals. Spill Containers feature: Quick release lid, Meshed floor, Drain point ball valve, PVC construction

Ordering Information

Part No	Description
JBFA65	Spill Kit Container
8790	Zippered Truck Kit
8834	Duffel Bag Kit
CEP-P100	17" x 19" x 3/8" Sheets
8835	Sock 3" x 48"
9107	Disposal Bag

Platform Ladders

The Hills / Bailey range of aluminium platform ladders conform to Australian and New Zealand Standard 1892 and have an industrial load rate of 140kg.

Available with “Treadsafe” platform and optional safety-advice decal.

Features

- Industrial Duty Rated. Designed for use on industrial work sites where greater strength and safety is required
- Heavy Duty, 150kg Load Rating
- Strong, aluminium construction
- Fully welded front and rear frames for strength and durability
- Wide, aluminium anti-slip platform (490x400mm) for a secure work area
- 900mm handrail height from platform
- Anti-slip rubber feet for added safety and stability
- Made to Australian and New Zealand Standards AS/NZS 1892.1
- Available - optional retractable Castors/Wheels Kits
- Australian Made & Owned

FS22972	Castor/Wheel Kit (Fits 7-8" Plat)

All product dimensions indicated are nominal.

Wing Mats

These wing mats are designed to protect the aircraft wing from damage by the hose and nozzle during overwing refuelling. They are manufactured from thick durable Urethane, which is fuel and ultraviolet light resistant, weatherproof, non-marking and non-abrasive. The mats are also heavy enough so that they will not become displaced in windy conditions. They are available in a range of colours but our normal stock colour is high visibility Orange. However, in order to reduce risk of supplying the incorrect fuel grade (mis-fuelling), we also stock Red (for AVGAS) and Black (for Jet A1). Using the appropriate colour for the fuel being dispensed causes the refuelling operator to think about the fuel grade required, and any third parties (including the pilot) could also be more aware of the grade of fuel being delivered.

Ordering Information

Size: 460 x 610mm, opening diameter 127mm

Part No	Colour
56AFP-1824	Hi-Vis Orange
56AFP-1824B	Black
56AFP-1824R	Red

Size: 460 x 920mm, opening diameter 127mm

Part No	Colour
56AFP-1836	Hi-Vis Orange
56AFP-1836B	Black
56AFP-1836R	Red

Overwing Refuelling Tags - Mis-Fuelling Prevention

When refuelling light aircraft, the pilot is often not present which increases the risk of supplying the incorrect grade of fuel (mis-fuelling). In order to reduce this risk, and at the request of one of the major fuel suppliers, we have developed a Refuelling Tag. After completion of each refuelling, the appropriate tag is filled in by the refuelling operator and tied to the controls of the aircraft. When the pilot return to the aircraft, it is then clear to him which grade of fuel has been delivered before he attempts to move the aircraft.

Part No	Description
0906000133	Jet A1 Refuelling Tag (Pack of 50)

Part No	Description
0906000134	AVGAS Refuelling Tag (Pack of 50)

Stainless Steel Buckets

Stainless steel buckets complete with carry handle, pourer, static lead and clamp.

Ordering Information

Part No	Description
T/PP95483	Stainless steel bucket

Fire Extinguisher Holder

These new lightweight fire extinguisher holders are a strong, durable design. The flat back ensures easy installation and they can be mounted on either truck or trailer. An internal tension strap helps secure the extinguisher and minimise any movement inside the holder. Will accept extinguishers 600mm in height.

Ordering Information

Stainless Steel Safety Lock Wire

Safety wire or lockwire is a type of lock mechanism that prevents fasteners from loosening due to vibration and other forces. The presence of safety wiring also indicates that the fasteners have been properly tightened.

Ordering Information

Part No	Description
GTP-1924	.032" Stainless Steel Safety Lock Wire

Water Finding Paste

Water Finding Paste is a water detection system used to aid in the detection of water within fuel supplies. Water Finding Paste is normally used in the petroleum industry to monitor and detect moisture levels in various fuel types.

Ordering Information

Part No	Description
On request	Jars or tube of Water Finder Paste available

Fuel Finding (Ullage) Paste

Kolor Kut Fuel Finding (Ullage) paste is light pink in colour and turns deep red upon contact with most hydrocarbon fuels. It gives a clear level reading on the dip rod or tape, even when evaporation at the interface would normally cause distortion of the reading.

Ordering Information

Part No	Description
M056	Kolor Kut 62g Tub Fuel (Ullage) Paste

Density Calculator

The Density Calculator converts density reading taken with a hydrometer to corrected density at 15°C. It separates scales for 3 different types of fuel.

Retail Fueling

Components and products to protect the environment and the consumer at retail fueling sites for conventional and alternative fuels.

Dispensing & Automation Solutions

Manufacturing a complete range of fuel dispensers, pumps and automation systems for the global retail fueling market.

Electronic Systems

Innovative electronic tank gauges and fuel control systems to ensure customers know how much fuel they have and where it is going. Also, Automated Vehicle Wash Systems.

Chemical & Industrial

Safe and efficient loading and unloading of critical hazardous chemicals: loading arms, swivel joints, sight flow indicators, quick and dry disconnect couplers, and safety breakaways.

Transportation

Components and systems for use on Tank Trucks and Rail Tank Cars to ensure the safe handling, loading, transport and unloading of hazardous bulk products, including: petroleum, chemical and dry bulk cargo.
